LexWiki and LexWiki Publisher

⚠️ The information and links on this page are no longer being updated and are provided for reference purposes only.

Information is available on this wiki for the following:

- LexWiki
- LexWiki Publisher

LexWiki is a collaborative terminology authoring platform based on Semantic MediaWiki and LexGrid technology. It is designed to provide terminology users and subject matter experts the ability to browse and discuss terminology content and structure, and the ability to create machine readable structured proposals. Protégé components are not part of this package but are being considered for future releases.

LexWikiPublisher is a corollary tool used to publish content from a LexEVS server into the LexWiki system. Refer to the LexWiki Publisher page for more information.

Once the LexWiki tool has been installed, the publisher tool may be used to populate the Wiki. LexWiki Publisher 2.0 has new flexible architecture to allow it to be configured easily and achieve a customized transformation of LexEVS 6.0 (or later) content.
